## ABSTRACTS

### zVPS 4.3 update

Velocity software continuously looks for ways to be innovative in how to approach performance management for linux on z/VM. In January, we released zVPS 4.3 with support for z/VM 6.4, but also many updates to enhance performance management for Linux. This presentation will look at what has been added in zVPS 4.3, will provide our roadmap, and provide opportunity for your feedback.

### Performance Case Studies

Analyzing performance problems is usually not fun if you have 10 managers looking over your back and your users are complaining. Learning a strategy and following a straightforward flowchart to solve your performance problems BEFORE you have a problem is not a bad idea. This presentation will show a strategy, and a flow chart and solve Linux on z/VM performance problems using that strategy. zVPS will be used for all analysis.

### Docker and OpenShift

At our last Hillgang meeting I introduced Docker and showed how containers are built and run. In this session I will examine using the OpenShift tool to manage, build, deploy, and monitor containers. I will also provide an update on the containers ready for use on Linux on z

If the demonstration pixies are kind there'll be a demonstration of running and managing containers.

### CA Update for z/VM 6.4

z The presentation will give general information for z/VM 6.4.0 support for CA z/VM products. In addition, it will provide details of changes made for z/VM 6.4.0 support and product enhancements provided in CA VM:Secure 3.2.
