

# **Diagnosing Common Application Problems Under LE on VM/ESA**

## **Session 9124**

**Mark Picard**  
**LE Level 2 Support**  
**[picard@us.ibm.com](mailto:picard@us.ibm.com)**

**July 2000**

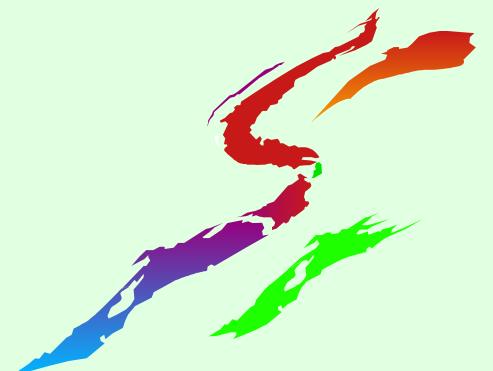

# Agenda

---

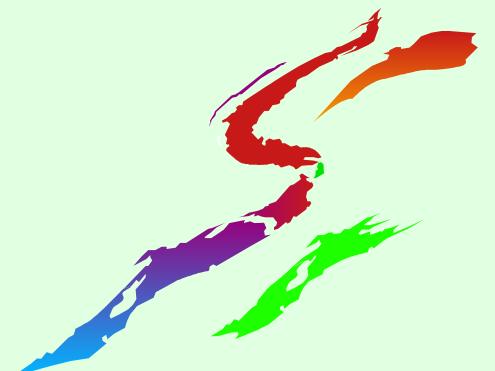

- Common LE functions
- LE Condition Handling
- Important Modules
- Messages and ABENDs
- Condition Tokens
- Storage problems?
- Collecting Error Documentation
- Diagnosing Application Problems
- Summary
- Additional Information

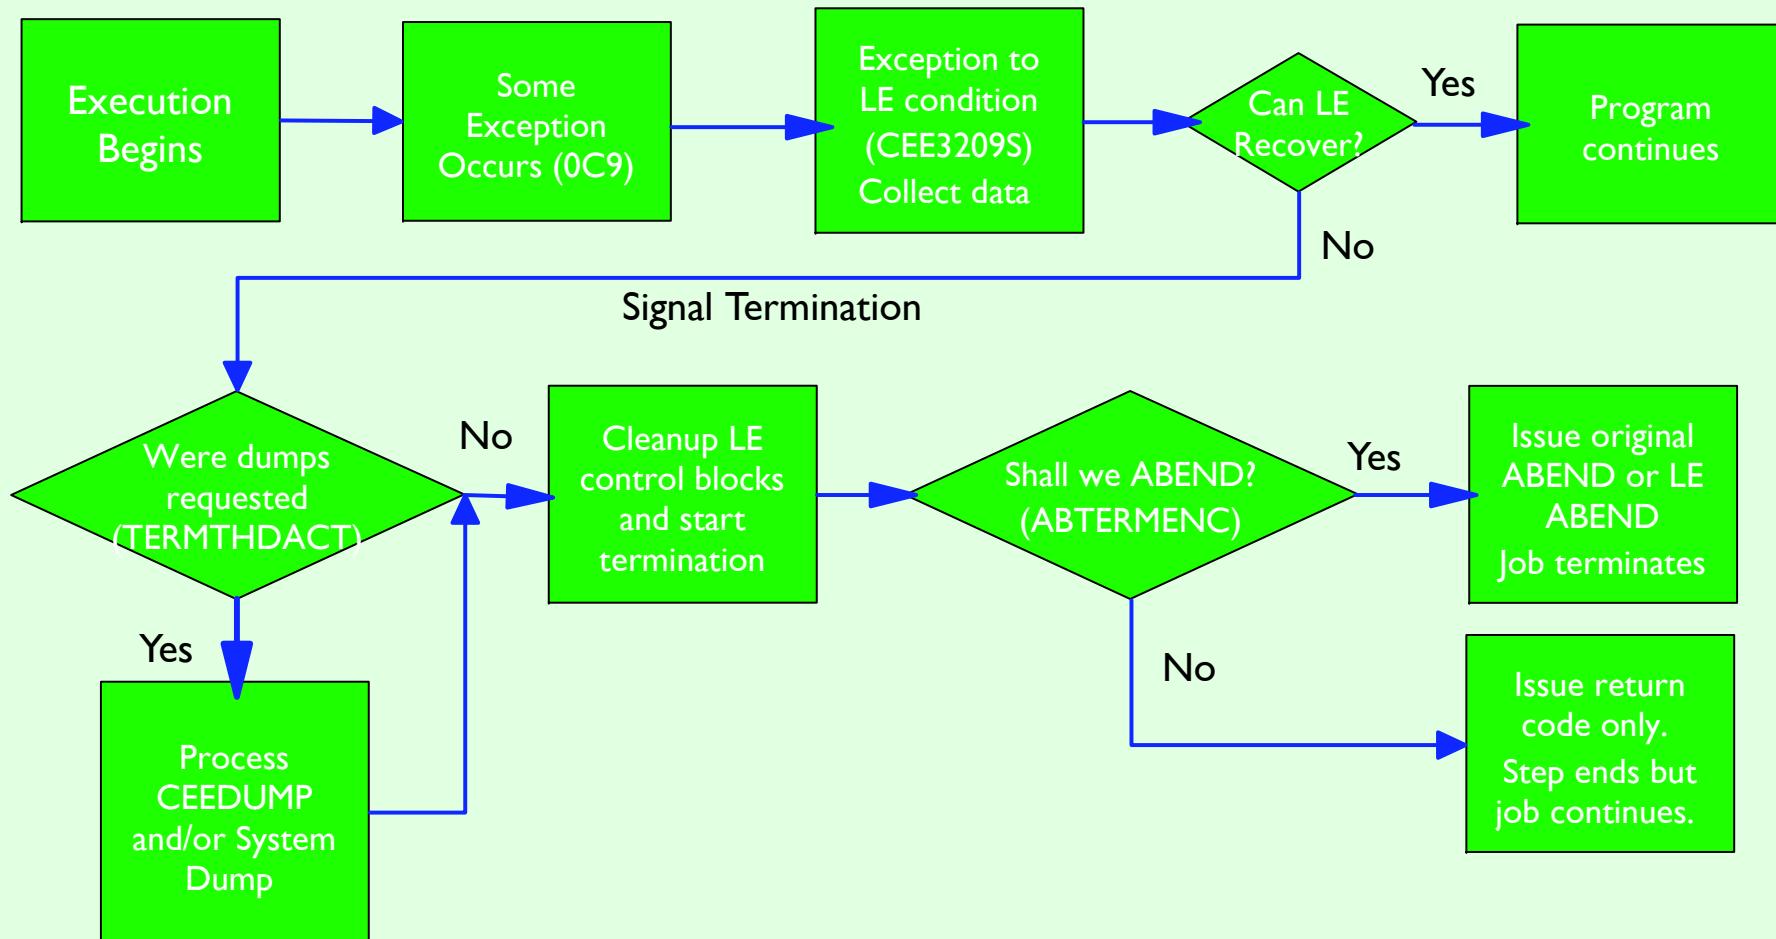

# Common LE Functions

- CEL is a set of common functions and routines used by all member languages of LE
  - Initialization
  - Storage management
  - **Condition Handling**
  - Message services
  - Date/Time services
  - Math functions
  - Termination

# LE Condition Handling

## Condition Handling Flow (extremely over simplified)

# Important Modules

## CEEHDSP

- Always the top CSECT in CEEDUMPs
- Schedules the CEEDUMP to be taken and schedules termination - **Ignore**
  - LE Condition Handling CSECTs start with CEEH\*

## CEEPLPKA

- LE's main load module, contains CEEHDSP
- ABENDs reported here can be either LE or application failures

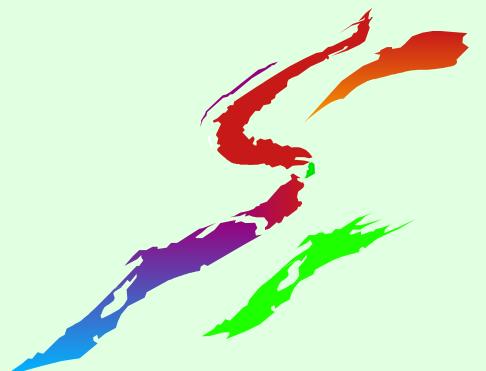

# Important Modules

## ■ CEEBINIT

- LE's main initialization load module
  - LE Initialization CSECTs start with CEEBxxxx

## ■ CEEHSGLT

- Signal processor with termination
  - LE's way of raising a condition
  - **IGNORE** - the previous module detected the problem

# Important Modules

## ■ CEEEVxxx

- LE Event Handler load modules
- xxx is the member number of the language
  - 003 C/C++      ● 010 PL/I
  - 005 COBOL      ● 011 VA PL/I
  - 007 FORTRAN    ● 012 Debug Tool
  - 008 DCE

Copyright International Business Machines Corporation 2000

# Messages and ABENDs

## ■ Message (and Module) Prefixes

- CEE        CEL (but may be reporting a problem elsewhere)
- IGZ        COBOL
- IBM        PL/I
- AFH        FORTRAN
- EDC        C/C++

## ■ See LE Debug Guide and Run-Time Messages for details on LE messages and ABENDs

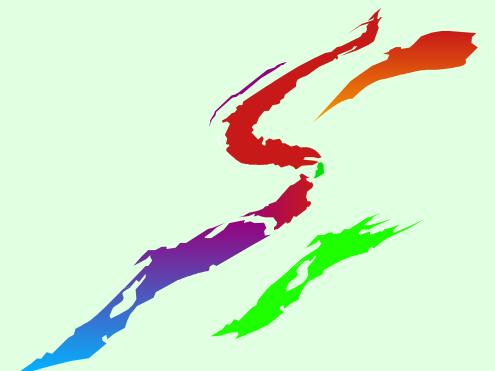

# Messages and ABENDs

## ■ Common CEL messages

- CEE32nnS Indicates ABEND0Cx
- CEE3250C Some non-0Cx ABEND occurred
- CEE0802C HEAP damage detected (normally application error)
- CEE0813S Out of storage
- CEE0374C LE detected an error (examine token)

# Messages and ABENDs

- U4038 Some Severe error occurred, but no dump was requested (useless)
- U4039 Some Severe error occurred and a CEDUMP (and optionally System dump) was requested
- U4083 Savearea backchain in error\*
- U4087 Error during error processing\*
- U4093 Error during initialization\*
- U4094 Error during termination\*

\* reason code needed to be meaningful

Copyright International Business Machines Corporation 2000

# Condition Tokens

## Condition Token (Feedback Code)

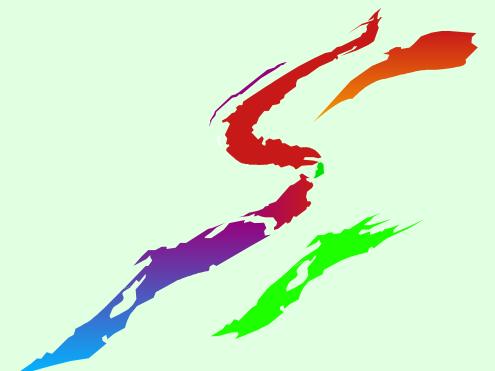

- Example: 00030C84 59C3C5C5 xxxxxxxx
  - 0003 | 0C84 | 59 | C3C5C5 |  
xxxxxxx
    - ▶ 0003 Severity
      - 0000 Informational (I)
      - 0001 Warning (W)
      - 0002 Error (E)
      - 0003 Severe (S)
      - 0004 Critical (C)

# Condition Tokens

## Condition Token (*continued*)

- 0003 | 0C84 | 59 | C3C5C5 |  
xxxxxxxx  
  - ▶ 0C84      Hex message number (3204)
  - ▶ 59          Flags (ignore)
  - ▶ C3C5C5     Facility ID (message prefix)
  - ▶ xxxxxxxx    Instance specific information  
(internal use)
- This token represents message  
CEE3204S (0C4)

# Storage Problems?

## CEE08I3S or other out of storage indicators

- Use RPTSTG RTO to adjust HEAP and STACK allocations
- Move application above the line when possible - set ALL3I(ON), etc

## poor performance due to storage many obtains

- use HEAPPOOLS RTO - predominately helpful for C/C++ malloc
- adjust HEAP/STACK increments

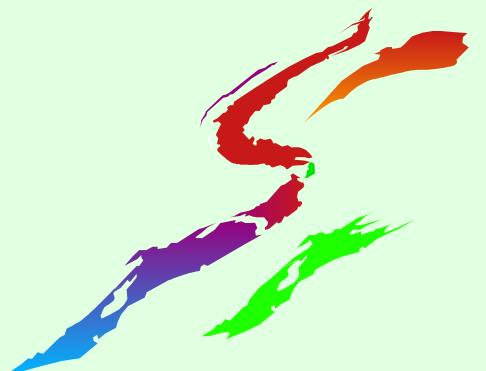

Copyright International Business Machines Corporation 2000

# Storage Problems? (cont)

## ■ HEAP damage - CEE0802S or other indicators

- almost always an application problem - may not have manifest on other 'platforms'
- System dump critical for debug
- Use HEAPCHK(ON) to narrow the window
  - ▶ performance dog!

# Collecting Error Documentation

## ■ Getting useful information

- Use LE run-time option TERMTHDACT()
  - MSG Message only (default)
  - TRACE Traceback and message only
  - DUMP Basic CEEDUMP
  - UADUMP Full CEEDUMP, system dump
- Use the LE run-time option TRAP(OFF)
  - not recommended in most situations

Copyright International Business Machines Corporation 2000

# Collecting Error Documentation

## ■ Messages

- go to the console or can be directed to a file with MSGFILE Runtime option

## ■ CEDUMP

- sent to the PRT
- formatted dump of traceback and some storage

## ■ System Dump

- sent to the RDR
- VMDUMP of storage - DUMPSCAN  
viewable

Copyright International Business Machines Corporation 2000

# Collecting Error Documentation

---

## ■ Getting **NON-USEFUL** information

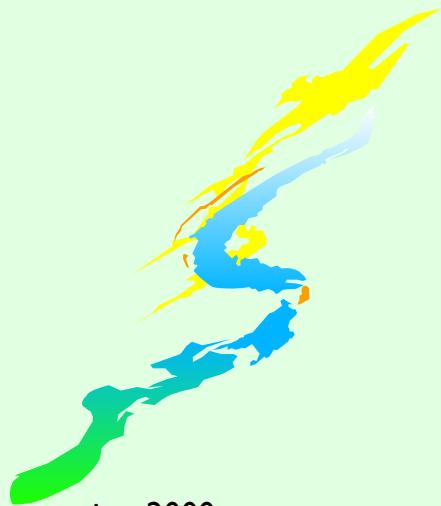

- When ABTERMENC(ABEND) is set the "original " ABEND is reissued at LE termination
  - **DO NOT TRAP ON THIS ABEND**
  - LE environment has already been cleaned-up and therefore a dump at this point is useless
  - Use TERMTHDACT to get the appropriate dump

# **Diagnosing Application Problems**

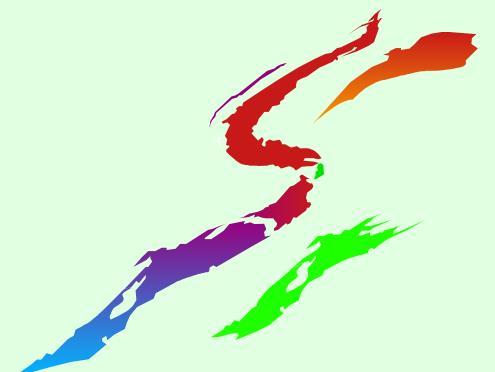

**'C' application example**

# Diagnostic Documentation

- Messages
- CEEDUMP
- System Dump

# Summary

---

- CEE32xx messages are really ABEND0Cy.
- Don't Trap on an LE reissued ABEND!
- Change runtime options to get a dump
- LE reported errors need further investigation to determine owner of **original** problem.
  - GET PSW and Regs from CEEDUMP
- Use **EXCEPTION** line in CEEDUMP for program checks.

# Additional Information

---
