ABSTRACTS

Smarter Planet, Dynamic Infrastructure, New Workloads and Cost

Adapting to a smarter planet requires change. Creating a Dynamic Infrastructure with new workloads for System z is ready for the challenge.

Come see how IBM can help you benefit from blending traditional IT with Cloud Computing on this platform.

How to Solve Common z/VM and Linux on System z Operations Problems

This presentation will explain how to resolve common problems found in today's z/VM and Linux on System z operations environment using CA VM:Operator features.

z/VM V6.1 - Advancing the Art of Server Virtualization

This presentation will highlight the new functions available with z/VM V6.1, IBM's newest version of advanced server virtualization support for IBM System z. Building on the functionally rich base of z/VM Version 5.4, z/VM V6.1, previewed on July 7, 2009, further enhances the economic attractiveness of consolidating workloads on the mainframe. Find out how z/VM V6.1 on IBM System z10 advances the art of enterprise virtualization. The speaker will also provide an overview of future z/VM support ("statements of direction") included in the z/VM V6.1 preview announcement.

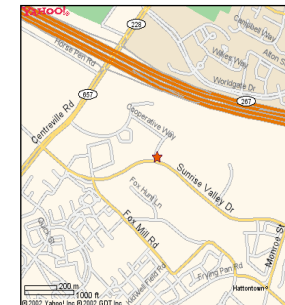

Free for All

Free for all discussion.
